OBJECTIVE

Results-driven Electronics and Communication Engineering graduate with expertise in Java Full Stack Development. Certified in building scalable web applications, RESTful APIs, and data-driven systems using Java, Spring Boot, React, and SQL. Passionate about delivering clean, maintainable code and contributing to impactful engineering teams.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python, MySQL
Frontend: HTML5, CSS3, JavaScript
Backend & Frameworks: Java, Spring Boot, Spring MVC, REST API Design, MVC Architecture
Databases: MySQL, SQL
Tools & Technologies: Apache Kafka, Docker, Git, Excel, SCADA, MIS
Concepts: Microservices, NLP, Real-time Data Streaming, Full Stack Development
Soft Skills: Problem-solving, Teamwork, Adaptability, Attention to Detail, Quick Learner

EXPERIENCE

Project Technical Assistant *Bangalore, India*

BESCOM June 2025 – March 2026

- Developed REST APIs using Spring Boot for internal operational modules including consumer data management, daily log tracking, and MIS report generation.
- Worked with SCADA operational data and built backend services to process and store real-time infrastructure metrics, supporting system monitoring and uptime reporting.
- Automated MIS report generation using Spring Scheduler; managed operational logs and performance data to support engineering team decision-making.

PROJECTS

Wingmann — Real-time Dating & Chat App github.com/ShradhaBiradar100/Wingmann

Tech Stack: React · Node.js · Socket.io · Firebase · Express · Vercel · Render

- Built a full-stack real-time chat application with Socket.io enabling instant messaging, live typing indicators, and accurate online/offline presence detection across multiple concurrent users.
- Implemented Google OAuth via Firebase Authentication and designed a multi-stage user flow — animated landing page, login screen, and chat interface — with persistent session management.
- Deployed frontend on Vercel and backend on Render with Gemini AI integration for content moderation, ensuring safe and respectful communication on the platform.

Kafka-Based Entity Recognition System github.com/ShradhaBiradar100/Kafka-NER-Pipeline

Tech Stack: Apache Kafka · Docker · Python · NLP · Microservices

- Architected and implemented a real-time data streaming pipeline using Apache Kafka, enabling continuous ingestion, processing, and analysis of text data at scale with sub-second latency.
- Developed Dockerized producer and consumer microservices — the producer streamed tokenized word data to Kafka topics, while the consumer performed real-time Named Entity Recognition (NER) using NLP techniques.
- Built a live analytics module tracking word and entity frequencies in real time, providing insights into data trends and entity distribution across the stream.

EDUCATION

BE in Electronics and Communication Engineering *2020 – 2024*
East West Institute of Technology, Bangalore

Pre-University (Science) *2017 – 2019*
Shaheen PU College, Bidar

SSLC *2017*
Shivaji High School, Bidar

TRAINING & CERTIFICATION

Java Full Stack Development *Apr 2024 – Sep 2024*
TAP Academy, Bangalore, India
